**Recommended Cleaning and Sterilization Procedure for Autoclavable Film and Sensor Holders**

1. Disassemble instrument(s).
2. Remove debris from components with hot water and soap.
3. Put components in sterilization pouches, and place in the middle tray of the autoclave, away from autoclave walls and heating element. Plastic parts must be in a separate pouch from metal arms, to avoid melting or warping.
4. Cycle per autoclave instructions below. Do not exceed 270°F (132°C).
   - DO NOT use phenol-based glutaraldehyde.
   - DO NOT use special application or ultrasonic cleaners.
   - DO NOT CHEMICLAVE or DRY-HEAT STERILIZE.
   - DO NOT cold sterilize.

Note: Plastic parts have a limited life and should be replaced periodically. Any method of sterilization will shorten the life of plastic parts.

Universal design. Custom FIT. The self-adjusting clip stretches to fit your sensor!

The Stretchy XCP-DS FIT Universal Autoclavable Sensor Holder

Reduce loading time during your digital radiograph procedures with the new XCP-DS FIT Universal Autoclavable Sensor Holder.
- Universal design provides a custom fit to your sensor
- One holder works with both size 1 and size 2 sensors for less inventory
- Autoclavable for lower cost per use — budget friendly!
- Rigid sensor support keeps sensor positioned accurately
- Silicone-cushioned edges help provide patient comfort and prevent sensor cover perforations
- Use with the XCP-ORA 3-in-1 Positioning System for easy paralleling

559902 Posterior 559904 Vertical Bitewing

Save time with the easy-to-use universal sensor holder.

Our new Snap-A-Ray DS holder allows you to quickly load and place digital sensors for accurate periapical radiographs. Prefer to use an arm and ring? You can with this new design: an optional 2-in-1 aiming ring and arm kit is available.

- **Universal design** works with your sensor
- **Autoclavable** for low cost per use
- **Rigid design** prevents flexing
- **Soft overmolding** is gentle to the sensor case
- **Endodontic/Implant version** available with cutout bite surface
- **Use** with the optional 2-in-1 Arm and Ring kit for easy alignment

Snap-A-Ray DS Endo for endodontic or implant imaging has a cutout bite surface to leave room for your work.

The optional arm and ring kit allows for easy, precise alignment.

Includes angled arm to accommodate shallow palates

The Improved Uni-Grip® 360 Universal Disposable Sensor Holder

Save time during your digital radiograph procedures with the new Uni-Grip 360 Universal Disposable Sensor Holder. Improved to make digital radiographs easy and accurate:

- **Make your FMX go faster** — one disposable holder for a complete full mouth series
- **More positioning range in posterior and anterior indications**¹ to help capture the anatomy you want to see
- **20% thinner base**¹ means less bulk for smaller mouths
- **Perforated adhesive tabs** for **fast, easy removal**
- **Save time** vs. using different holders for each indication

¹As compared to original Uni-Grip; data on file.

**Uni-GripAR® Positioning Arm and Ring**

Accurately align your x-ray cone with the universal Uni-GripAR positioning arm and ring for Uni-Grip holders.

- Fully autoclavable
- Works with any Uni-Grip holder
- Anterior, posterior and bitewing x-rays
- Color-coded for quick assembly for any position
- Bitepiece slides in in just a moment
- Lightweight for patient comfort

550100  Uni-GripAR Positioning Arm and Ring
The XCP-ORA One Ring & Arm Positioning System reduces the components needed to accurately position radiographic media with RINN XCP or XCP-DS biteblocks to just one ring, one arm.

- For film and sensors
- Autoclavable for low cost-per-use
- Lightweight construction helps patients maintain positioning
- Unique Ring & Arm design simplifies your positioning procedure with fewer parts

Now available in complete kits with biteblocks!
Each kit contains 1 XCP-ORA Ring, 1 XCP-ORA Arm, and a full complement of Anterior, Posterior and Bitewing Biteblocks for the designated media.

DIGITAL SENSOR HOLDERS

Your key to accurate positioning and perfect x-rays.
- Achieve distortion-free radiographs with paralleling technique
- Securely hold the sensor in place while precisely aligning the x-ray cone
- Custom baskets (holders) for your digital sensor equipment
- Meet all x-ray needs with one kit — anterior, posterior, bitewing, endo
- Available in comprehensive kits and individual components

**Easy to Use**
- Ergonomic design for enhanced convenience and patient comfort
- Easily assemble components with patented color-coding
- Simple reordering with standardized parts for all leading brands of sensors
- Fully steam autoclavable

**XCP Aiming Arms and Rings**

Aiming Rings and Arms are common to all XCP and XCP-DS systems. Systems that do not have one-piece biteblocks require bitepieces (common to all) and specialized baskets designed for each specific style and size of sensor.

Aiming Rings sold individually
- 540865 Anterior (Blue)
- 540860 Posterior (Yellow)
- 540934 Bitewing (Red)
- 550598 Endo (Green)

Arms sold individually
- 540857 Anterior (Blue pins)
- 540858 Posterior (Yellow pins)
- 540927 Bitewing (Red pins)
- 550597 Endo (no pins)

Universal Collimator

Align the beam and prevent misfocusing of x-rays by absorbing divergent radiation, and prevent radiation leakage.

- Use in conjunction with XCP, XCP-DS, BAI or EndoRay II Positioning Systems for accurate alignment
- Protect your patients by limiting the size of the primary x-ray beam to #2 film
- Quickly applies into open end of round PID
- Complies with NCRP Report 145

540853 Universal Collimator
**XCP® Film Holding Instruments**

The ultimate film holding system for patient comfort and practitioner ease-of-use for dental radiography. Take perfect anterior, posterior, bitewing and endodontic x-rays.

- Quickly align the x-ray cone to film and prevent cone cutting
- Easily assemble the components by using color coded XCP components
- Guide PID for proper alignment with short arms and light rings that accommodate all intraoral x-ray units
- Improve your patient’s comfort with the rounded biteblocks and open biteblock design for a softer bite
- Use same-arch bite technique for bitewings with a more closed bite
- Steam autoclavable

Max-i-Probe™
Endodontic/Periodontal Irrigation Probes

Max-i-Probe offers a unique design for unmatched effectiveness, patient comfort, and safety for irrigating root canals and periodontal pockets.

- Care for patients with this pre-sterilized, closed-end irrigating probe.
- Thoroughly irrigate root canal preparations, including the apical third, with side-port dispersal that creates an upward flushing motion.
- Easily attach and remove the luer lock connector from any disposable syringe.
- Enjoy quick and easy identification of sizes with color-coded hubs and labels.
- Also available in convenient probe + syringe packs — 100 probes plus 100 disposable 3cc syringes.

Confirmed The Best in the Journal of Endodontics:
“Although all the needles work with the same principle, the Maxi-Probe removed significantly more bacteria.... This finding is essentially in agreement with a previous study indicating that the unique side vent of these safety-ended needles produces upward turbulence that enhances complete cleaning of root canals.

“Some studies have concluded that the mechanical flushing action is more important than the type of irrigant because nonantimicrobial irrigants increase the efficiency of mechanical debridement in the main pulp canal space through lubrication.”

Journal of Endodontics, Volume 33, Number 6, June 2007

The tip makes the difference.

Generic “closed-end” probe

Max-i-Probe

Others claim a closed tip, but a microscope may reveal a much different story.

The Maxi-Probe tip is welded closed to protect your patient from fluids expressing past the apex.
